

Unit of work  
**Living things and their habitats**

Year group  
**2**

**Prior learning**

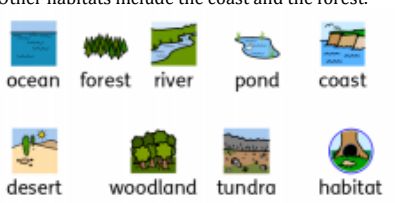

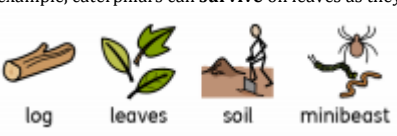

- The names of some common **plants** and types of **trees** and animals including fish, amphibians, reptiles, birds and mammals
- identify and name a variety of common animals that are **carnivores, herbivores** and **omnivores**
- describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals, including pets)
- identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.

**National Curriculum**

Pupils should be taught to:

- explore and compare the differences between things that are living, dead, and things that have never been alive
- identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other
- identify and name a variety of plants and animals in their habitats, including microhabitats
- describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food.

**Knowledge/ Skills**

What is a <b>habitat</b> ?	<ul style="list-style-type: none"> <li>• A <b>habitat</b> is a place where living things, such as animals and <b>plants</b>, can find all of the things they need to <b>survive</b>. This includes food, water, air, space to move and grow and some shelter.</li> <li>• Some <b>habitats</b> are large, like the ocean, and some are very small, such as under a log.</li> <li>• Some <b>habitats</b> in our local area include the river and woodlands. Other habitats include the coast and the forest.</li> </ul> 
What is a <b>microhabitat</b> ?	<ul style="list-style-type: none"> <li>• <b>Microhabitats</b> are very small habitats where <b>minibeasts</b> may live.</li> <li>• Examples of microhabitats include under stones, in grass, under fallen leaves and in the soil.</li> <li>• <b>Minibeasts</b> that can be found there include worms, snails, ants, centipedes, millipedes, and butterflies and they help to keep the <b>microhabitat</b> healthy.</li> <li>• <b>Minibeasts</b> are able to <b>survive</b> in their <b>habitats</b> because they can find the things they need to <b>survive</b> there, such as food and water. For example, caterpillars can <b>survive</b> on leaves as they give them food.</li> </ul> 
How do animals and <b>plants</b> depend on each other?	<p>Animals and <b>plants</b> depend on each other to <b>survive</b>. For example, worms <b>depend</b> on <b>plants</b> because they feed on dead leaves, but plants depend on worms who make the soil healthy by digging holes and allowing air in.</p> <ul style="list-style-type: none"> <li>• Birds also need worms because they eat them. Worms are a <b>source</b> of food for birds.</li> <li>• This called a <b>food chain</b>.</li> <li>• If there were no worms, there would be less birds as there would be more competition for food. The soil would not be as healthy without worms.</li> </ul>  <ul style="list-style-type: none"> <li>• All living things (or things that were once living) have a part to play in <b>food chains</b>. Without them, other animals and <b>plants</b> may not be able to survive</li> </ul>

**Vocabulary and definitions**

Word	Definition
Biomes	a natural area of <b>vegetation</b> and <b>animals</b>
Carnivore	an animal that eats meat
Depend	If you <b>depend</b> on someone or something, you need them in order to be able to <b>survive</b> physically
Food chain	a series of living things which are linked to each other because each thing feeds on the one next to it in the series
Habitat	the natural environment in which an animal or <b>plant</b> normally lives or grows
Herbivore	an animal that only eats plants
Invertebrate	a creature that does not have a spine, for example an insect, a worm, or an octopus
microhabitat	a small part of the environment that supports a habitat, such as a fallen log in a forest
Minibeast	a small <b>invertebrate</b> animal such as an insect or spider
Offspring	a person's children or an animal's young
Omnivore	person or animal eats all kinds of food, including both meat and <b>plants</b>
Plant	a living thing that grows in the earth and has a stem, leaves, and roots
Source	where something comes from
Tree	a tall plant that has a hard trunk, branches, and leaves
Vegetation	<b>plants</b> , trees and flowers
vertebrae	a creature which has a spine

## Investigate!

- Observe carefully a **microhabitat** (forest school) and sketch the **plants** you find. Can you find any evidence of **plants** being eaten? What other living things can you see?
- Compare two different habitats and explain what animals and plants can be found there.
- Go on a **minibeast** hunt. What **minibeasts** can you find? Why can they survive in their habitat? Create a tally chart or pictogram to show your results.
- Compare two different **microhabitats**. What do you notice about the **minibeasts** that live in each one? Why do you think that is? Discuss how the **minibeasts** help keep the microhabitat healthy.
- Use your knowledge of **biomes** to describe the types of animals and **plants** that live there. Match animals and plants to their **habitats** (e.g. forest, ocean, poles, desert).
- Answer questions such as 'Why would a polar bear not survive in the desert?'
- Create simple **food chains** that begin with a **plant**. Discuss what would happen if one of those living things in a **food chain** did not exist.

Question 1: Which of these is <b>not</b> an example of a microhabitat?	Start of unit:	End of unit:
under a log		
the ocean		
under fallen leaves		
in the grass		

Question 2: Which of these might you find in a microhabitat? Tick	Start of unit:	End of unit:
exercise		
medicine when given by a doctor or nurse		
balanced diet		
look after animals		

Question 3: Billy has found a woodlouse under a large rock. What does a woodlouse need to survive?	Start of unit:	End of unit:
food		
air		
water		
food, air and water		

Question 4: How do worms help keep their habitat healthy?	Start of unit:	End of unit:
They wriggle		
They hide in the soil		
They create holes in the soil allowing air in		
They don't keep their habitat healthy		

Question 5: Place these in the correct place to create a simple food chain.	Start of unit:	End of unit:
<b>caterpillar      sparrow      leaves</b>
